(54) Title: A SHOE

(57) Abstract: A shoe has a flap (7) articulated to the upper (T), which flap may take a non-operation condition (I), in which the outer surface of the flap (7) is adjacent to the shoe upper (T). A protection element (9) has a strip (90) forming at least a first wing (90a) and a second wing (90b) and taking an unfolded configuration (D), as a consequence of the definition of the non-operation condition (I) of the flap (7), in which the strip (90) encloses the rear upper portion of the shoe (1), rising above the flap (7), and the first and second wings (90a, 90b) enclose the shoe sides, to be overlapped above the opposite edges (K) of the fore central part of the upper (T), to protect this part from possible water penetration.
